The MyAIM Image Grid Prompt Pack

The exact prompts we used — and what made them work.

This document contains the complete, unedited prompts from our image grid workflow, along with notes on what each element does and why it's there. Use these as starting points, not scripts. The best prompt is always the one you've customized for your specific project.

How to Use This Document

Each prompt is followed by a breakdown of its key elements. When you're writing your own prompt, you don't need to copy ours word for word — you need to understand the structure and fill it with your own content.

The four-part framework that underlies every prompt:

1. **Grid structure** — tells the AI what format to produce
2. **Style guide** — establishes visual consistency across all 16 cells
3. **Cell descriptions** — specifies what goes in each cell
4. **Filler instruction** — handles empty cells gracefully

Batch 1: The Testworth Family Portraits

The prompt that generated the uniform family portrait grid — 8 family members, 2 versions each, all correctly sliced.

The Prompt

```
A precise uniform 4x4 grid of 16 individual portrait photographs, each cell
exactly equal size with a thin white border between cells. All portraits
share the same visual style: warm, natural lifestyle photography, soft
natural lighting, shallow depth of field, professional but approachable. No
text, no graphics, no overlays anywhere.

Row 1 (top):
Cell 1: Sarah (Mom), late 30s, warm medium-brown wavy hair, light olive
skin, natural makeup, warm smile, cream cardigan, sunlit kitchen.
Cell 2: Sarah (Mom), same appearance, sage green sweater, living room.
Cell 3: Mark (Dad), early 40s, short brown hair with slight gray at temples,
short neat beard, faded red flannel shirt, standing on a porch.
Cell 4: Mark (Dad), same appearance, navy blue henley, backyard.

Row 2:
Cell 5: Alex (Teen Boy), age 15, messy dark hair, vintage band t-shirt,
headphones around neck, sitting at a desk.
Cell 6: Alex (Teen Boy), same appearance, gray hoodie, holding a guitar.
Cell 7: Casey (Teen Girl), age 13, long brown hair, denim jacket over
striped shirt, reading a book.
Cell 8: Casey (Teen Girl), same appearance, yellow sweater, sitting on a
window seat.

Row 3:
Cell 9: Jordan (Girl), age 10, messy braids, bright blue t-shirt, drawing
with markers.
Cell 10: Jordan (Girl), same appearance, green jacket, holding a soccer
ball.
Cell 11: Ruthie (Girl), age 7, has Down syndrome, short blonde bob, joyful
expression, pink t-shirt and denim overalls, hugging a teddy bear.
Cell 12: Ruthie (Girl), same appearance, striped sweater, playing with
wooden blocks.

Row 4 (bottom):
Cell 13: Amy (Aide), age 25, curly red hair, gray sweater, warm encouraging
smile.
Cell 14: Amy (Aide), same appearance, blue scrub top, holding a clipboard.
Cell 15: Kylie (Aide), age 22, straight black hair, yellow cardigan,
friendly expression.
Cell 16: Kylie (Aide), same appearance, purple t-shirt, giving a thumbs up.
```

What Made This Work

Strict uniformity: Specifying “uniform 4x4 grid” and “each cell exactly equal size” prevents the AI from creating irregular layouts or merging cells, which makes slicing reliable.

Consistent character descriptions: Repeating “same appearance” while changing clothing and environment ensures the AI generates the same person across multiple cells.

Specific environmental details: “Standing in a sunlit kitchen” or “sitting on a window seat” gives the AI enough context to build a realistic background without distracting from the portrait.

Batch 2: The Three Little Hens (3D Storybook)

The prompt that generated the Pixar-style animated storybook grid — consistent characters across a 16-panel narrative arc.

The Prompt

```
A precise 4x4 grid of 16 square 3D animated illustration panels telling a
story, each cell exactly equal size with a thin white border between cells.
All 16 illustrations share the same visual style: high-quality 3D Pixar-
style animation, warm golden hour lighting, rich textures (feathers, wood,
straw), expressive characters, cinematic composition. No text, no letters,
no numbers anywhere in any cell.

The characters (consistent across all panels):
- Rosie: A plump Rhode Island Red hen (reddish-brown feathers) wearing a
tiny blue gingham apron.
- Goldie: A slender Buff Orpington hen (golden-yellow feathers) wearing a
tiny straw sunhat.
- Pepper: A small Barred Rock hen (black and white striped feathers) wearing
tiny wire-rimmed glasses.

Row 1 (top):
Cell 1: Establishing shot of a cozy wooden chicken coop with a red door,
morning sunlight.
Cell 2: Rosie, Goldie, and Pepper standing together outside the coop,
looking at a patch of bare dirt.
Cell 3: Rosie enthusiastically digging in the dirt with a small trowel.
Cell 4: Goldie and Pepper watching Rosie, looking skeptical.

Row 2:
Cell 5: Rosie proudly holding up a small green seedling.
Cell 6: Rosie carefully planting the seedling, watering it with a tiny
watering can.
Cell 7: Goldie napping in the shade of a sunflower.
Cell 8: Pepper reading a tiny book while perched on a fence post.

Row 3:
Cell 9: Time lapse effect — the seedling has grown into a tall, healthy
wheat stalk.
Cell 10: Rosie harvesting the golden wheat, wiping her brow.
Cell 11: Rosie grinding the wheat into flour using a small stone mill.
Cell 12: Goldie and Pepper looking through a window, smelling something
delicious.

Row 4 (bottom):
Cell 13: Rosie taking a beautiful, steaming loaf of bread out of a rustic
oven.
Cell 14: Goldie and Pepper standing at the door, looking hopeful and hungry.
Cell 15: Rosie smiling and slicing the bread to share with her friends.
```

```
Cell 16: All three hens sitting around a small wooden table, eating bread
together as the sun sets.
```

What Made This Work

Character definitions upfront: Defining the characters and their specific accessories (apron, sunhat, glasses) *before* the cell descriptions ensures the AI applies those rules consistently to every panel.

Narrative arc: The cell descriptions follow a clear chronological story, which helps the AI maintain lighting and environmental consistency (morning to sunset).

Action-oriented descriptions: Describing exactly what characters are doing ("enthusiastically digging," "wiping her brow") creates dynamic, expressive panels rather than static poses.

Batch 3: The Consistent Fictional Woman (Digital Avatars)

The prompt that generated the same fictional woman across 16 completely different environments — the avatar training use case.

The Prompt

```
A precise 4x4 grid of 16 square photorealistic portrait photographs of the
same woman, each cell exactly equal size with a thin white border between
cells. The woman has: warm medium-brown hair (shoulder length, natural
waves), light olive skin tone, dark brown eyes, scattered freckles across
her nose, approximately 35 years old, natural makeup, friendly and
approachable expression. Professional but warm. Studio-quality lighting
throughout. No text, no graphics, no overlays anywhere.

Row 1 (top):
Cell 1: Front-facing, neutral expression, slight smile, direct eye contact,
studio background.
Cell 2: Front-facing, warm genuine smile, eyes slightly crinkled, standing
in a bright modern kitchen.
Cell 3: Slight left turn (her left), looking toward camera, thoughtful
expression, sitting in a coffee shop.
Cell 4: Slight right turn (her right), looking toward camera, soft smile,
walking through an autumn park.

Row 2:
Cell 5: Looking slightly upward, as if thinking or listening, gentle
expression, home office setting.
Cell 6: Looking slightly downward, as if reading or reflecting, sitting on a
living room sofa.
Cell 7: Laughing naturally, head tilted slightly back, genuine, standing at
a farmers market.
Cell 8: Serious and focused, direct eye contact, composed, standing in front
of a bookshelf.

Row 3:
Cell 9: Profile view from left side, looking forward, standing on a city
street.
Cell 10: Profile view from right side, looking forward, sitting at a
restaurant table.
Cell 11: Three-quarter view from left, warm smile, standing in a garden.
Cell 12: Three-quarter view from right, neutral expression, sitting on a
yoga mat.

Row 4 (bottom):
Cell 13: Front-facing, surprised expression, eyebrows raised slightly,
standing in an art gallery.
Cell 14: Front-facing, warm and encouraging expression, slight head tilt,
sitting at a dinner party.
Cell 15: Front-facing, thoughtful expression, lips slightly pursed, standing
```

```
on a beach.
Cell 16: Front-facing, confident expression, direct eye contact, no smile,
standing in a modern office.
```

What Made This Work

Highly specific physical traits: “Scattered freckles across her nose” is a distinct feature the AI can latch onto to maintain identity across different lighting conditions and environments.

Varying environments: Placing the same character in 16 completely different settings proves consistency and provides diverse training data for an avatar model.

Angle and expression matrix: The prompt systematically works through front, profile, and three-quarter views combined with a range of expressions — exactly what avatar training tools need.

Batch 4: Homestead & Chores (Visual Schedule)

The Prompt

```
A precise 4x4 grid of 16 square illustrated household activity cards, each
cell exactly equal size with a thin warm white border between cells. All 16
illustrations share the same visual style: warm, cozy editorial illustration
style, slightly textured as if painted in gouache, muted but cheerful
palette. Colors: warm cream (#FFF8F0), dusty rose (#D4847A), sage green
(#8BAF8B), warm tan (#C4A882), and soft blue (#8BA8C4). No text, no letters,
no numbers anywhere in any cell.

Row 1 (top):
Cell 1: A broom sweeping a wooden floor, dust particles visible in a shaft
of light.
Cell 2: Dishes being washed in a soapy sink, bubbles floating up.
Cell 3: Laundry being folded on a bed, neat stacks of clothes.
Cell 4: A vacuum cleaner moving across a rug, seen from slightly above.

Row 2:
Cell 5: A watering can pouring water onto a small vegetable garden.
Cell 6: Eggs being collected from a nesting box, hands visible.
Cell 7: A compost bin with vegetable scraps being added to it.
Cell 8: Firewood being stacked neatly beside a stone fireplace.

Row 3:
Cell 9: Bread dough being kneaded on a floured surface.
Cell 10: Jars of jam being sealed and labeled on a kitchen counter.
Cell 11: A sewing machine with fabric being guided through it.
Cell 12: A child's hands planting a small seedling in a pot of soil.

Row 4 (bottom):
Cell 13: A mop and bucket on a clean kitchen floor, sunlight through a
window.
Cell 14: Grocery bags being unpacked onto a kitchen counter.
Cell 15: A calendar on a wall with dates circled, a hand reaching to add a
note.
Cell 16: A cozy reading nook with a lamp, a blanket, and a stack of books.
```

What Made This Work

Gouache texture: Specifying “slightly textured as if painted in gouache” produces a warmer, more handmade feel than standard illustration. Material references give the AI a specific aesthetic target.

Lighting details: “Dust particles visible in a shaft of light” and “sunlight through a window” add atmosphere and make images feel lived-in rather than clinical.

Variety within theme: The 16 cells cover a range of activities (indoor cleaning, outdoor chores, cooking, crafts) while staying within one thematic family. This variety makes the set more useful.

The Style Guide Library

These are reusable style guide blocks. Copy the one that fits your project and drop it into the style guide section of any grid prompt.

Paper Craft (Warm, Textured)

```
Hand-crafted paper and fabric textures, soft warm lighting from above, muted
earth tones with accents of sage green (#7A9E7E), honey gold (#C8864A), and
warm cream (#FAF7F2). Slight depth and shadow as if physically constructed.
No text, no letters, no numbers.
```

Watercolor Children’s (Bright, Cheerful)

```
Bright, cheerful watercolor and colored pencil aesthetic, clean white
backgrounds, bold outlines, child-friendly proportions. Colors are saturated
but not harsh: coral (#E8735A), sky blue (#5BA4CF), sunshine yellow
(#F5C842), grass green (#6BBF59). No text, no letters, no numbers.
```

Gouache Editorial (Warm, Cozy)

```
Warm, cozy editorial illustration style, slightly textured as if painted in gouache, muted but cheerful palette. Warm cream (#FFF8F0), dusty rose (#D4847A), sage green (#8BAF8B), warm tan (#C4A882). No text, no letters, no numbers.
```

Flat Vector (Clean, Modern)

```
Clean flat vector illustration style, minimal detail, bold geometric shapes, no gradients, no textures, solid color fills only. Primary palette: [your brand colors]. White or light gray backgrounds. No text, no letters, no numbers.
```

Photorealistic Portrait (Avatar Training)

```
Photorealistic portrait photography, studio-quality lighting, consistent subject appearance throughout: [physical description]. Professional but warm. No text, no graphics, no overlays.
```

Botanical Line Art (Elegant, Minimal)

```
Fine-line botanical illustration style, black ink on cream paper, delicate detail, no color fills, occasional light watercolor wash in sage and dusty rose. Clean, elegant, timeless. No text, no letters, no numbers.
```

Slicing Your Grid

Once you have your grid image, you need to slice it into individual files. Here are your options:

Option 1 — Manus (recommended for batches) Use the image-grid-slice skill. It slices the grid, names each file according to your naming convention, and can output multiple sizes simultaneously. Try Manus free: https://manus.im/invitation/F0KVQFJNF28T1L

Option 2 — Any AI assistant + Python Ask any AI assistant: "Write a Python script that takes a [dimensions] image, slices it into a 4x4 grid of 16 equal tiles, and saves each tile as a separate PNG named [your naming convention]."

Option 3 — Free online tools Search "image grid splitter" — several free web tools let you upload, specify rows and columns, and download a zip of sliced tiles.

This prompt pack is part of the MyAIM Vault tutorial series. For the full tutorial with visual examples, see "Consistent Characters & Styles" in the Vault.
